Functions

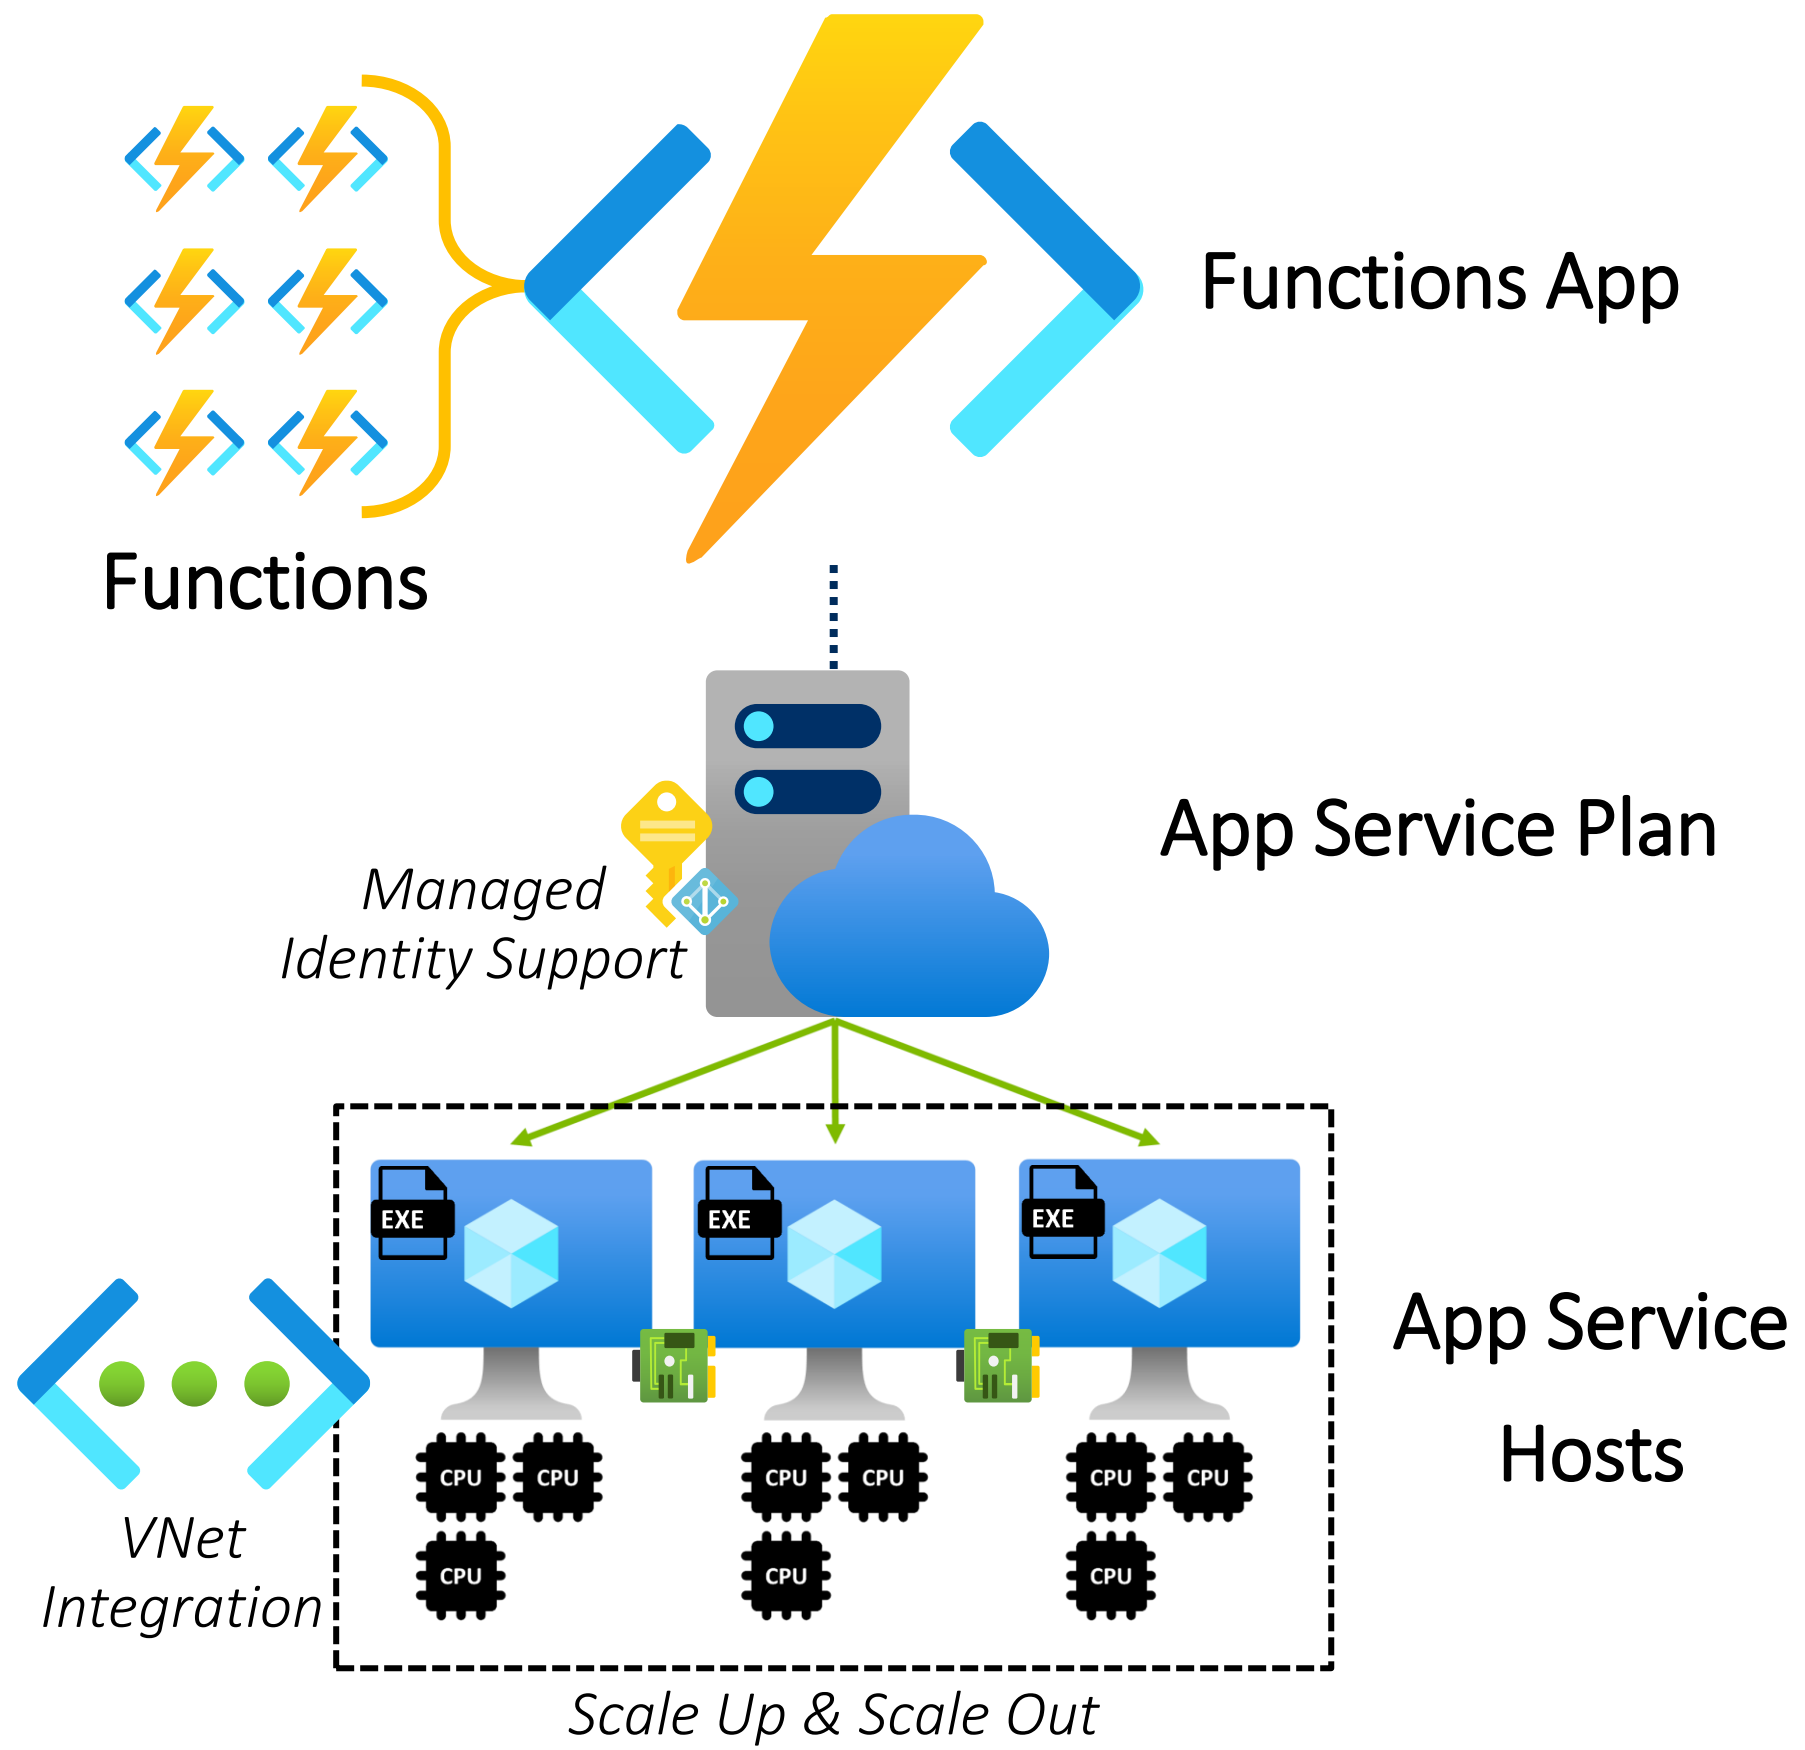

Cloud Formations

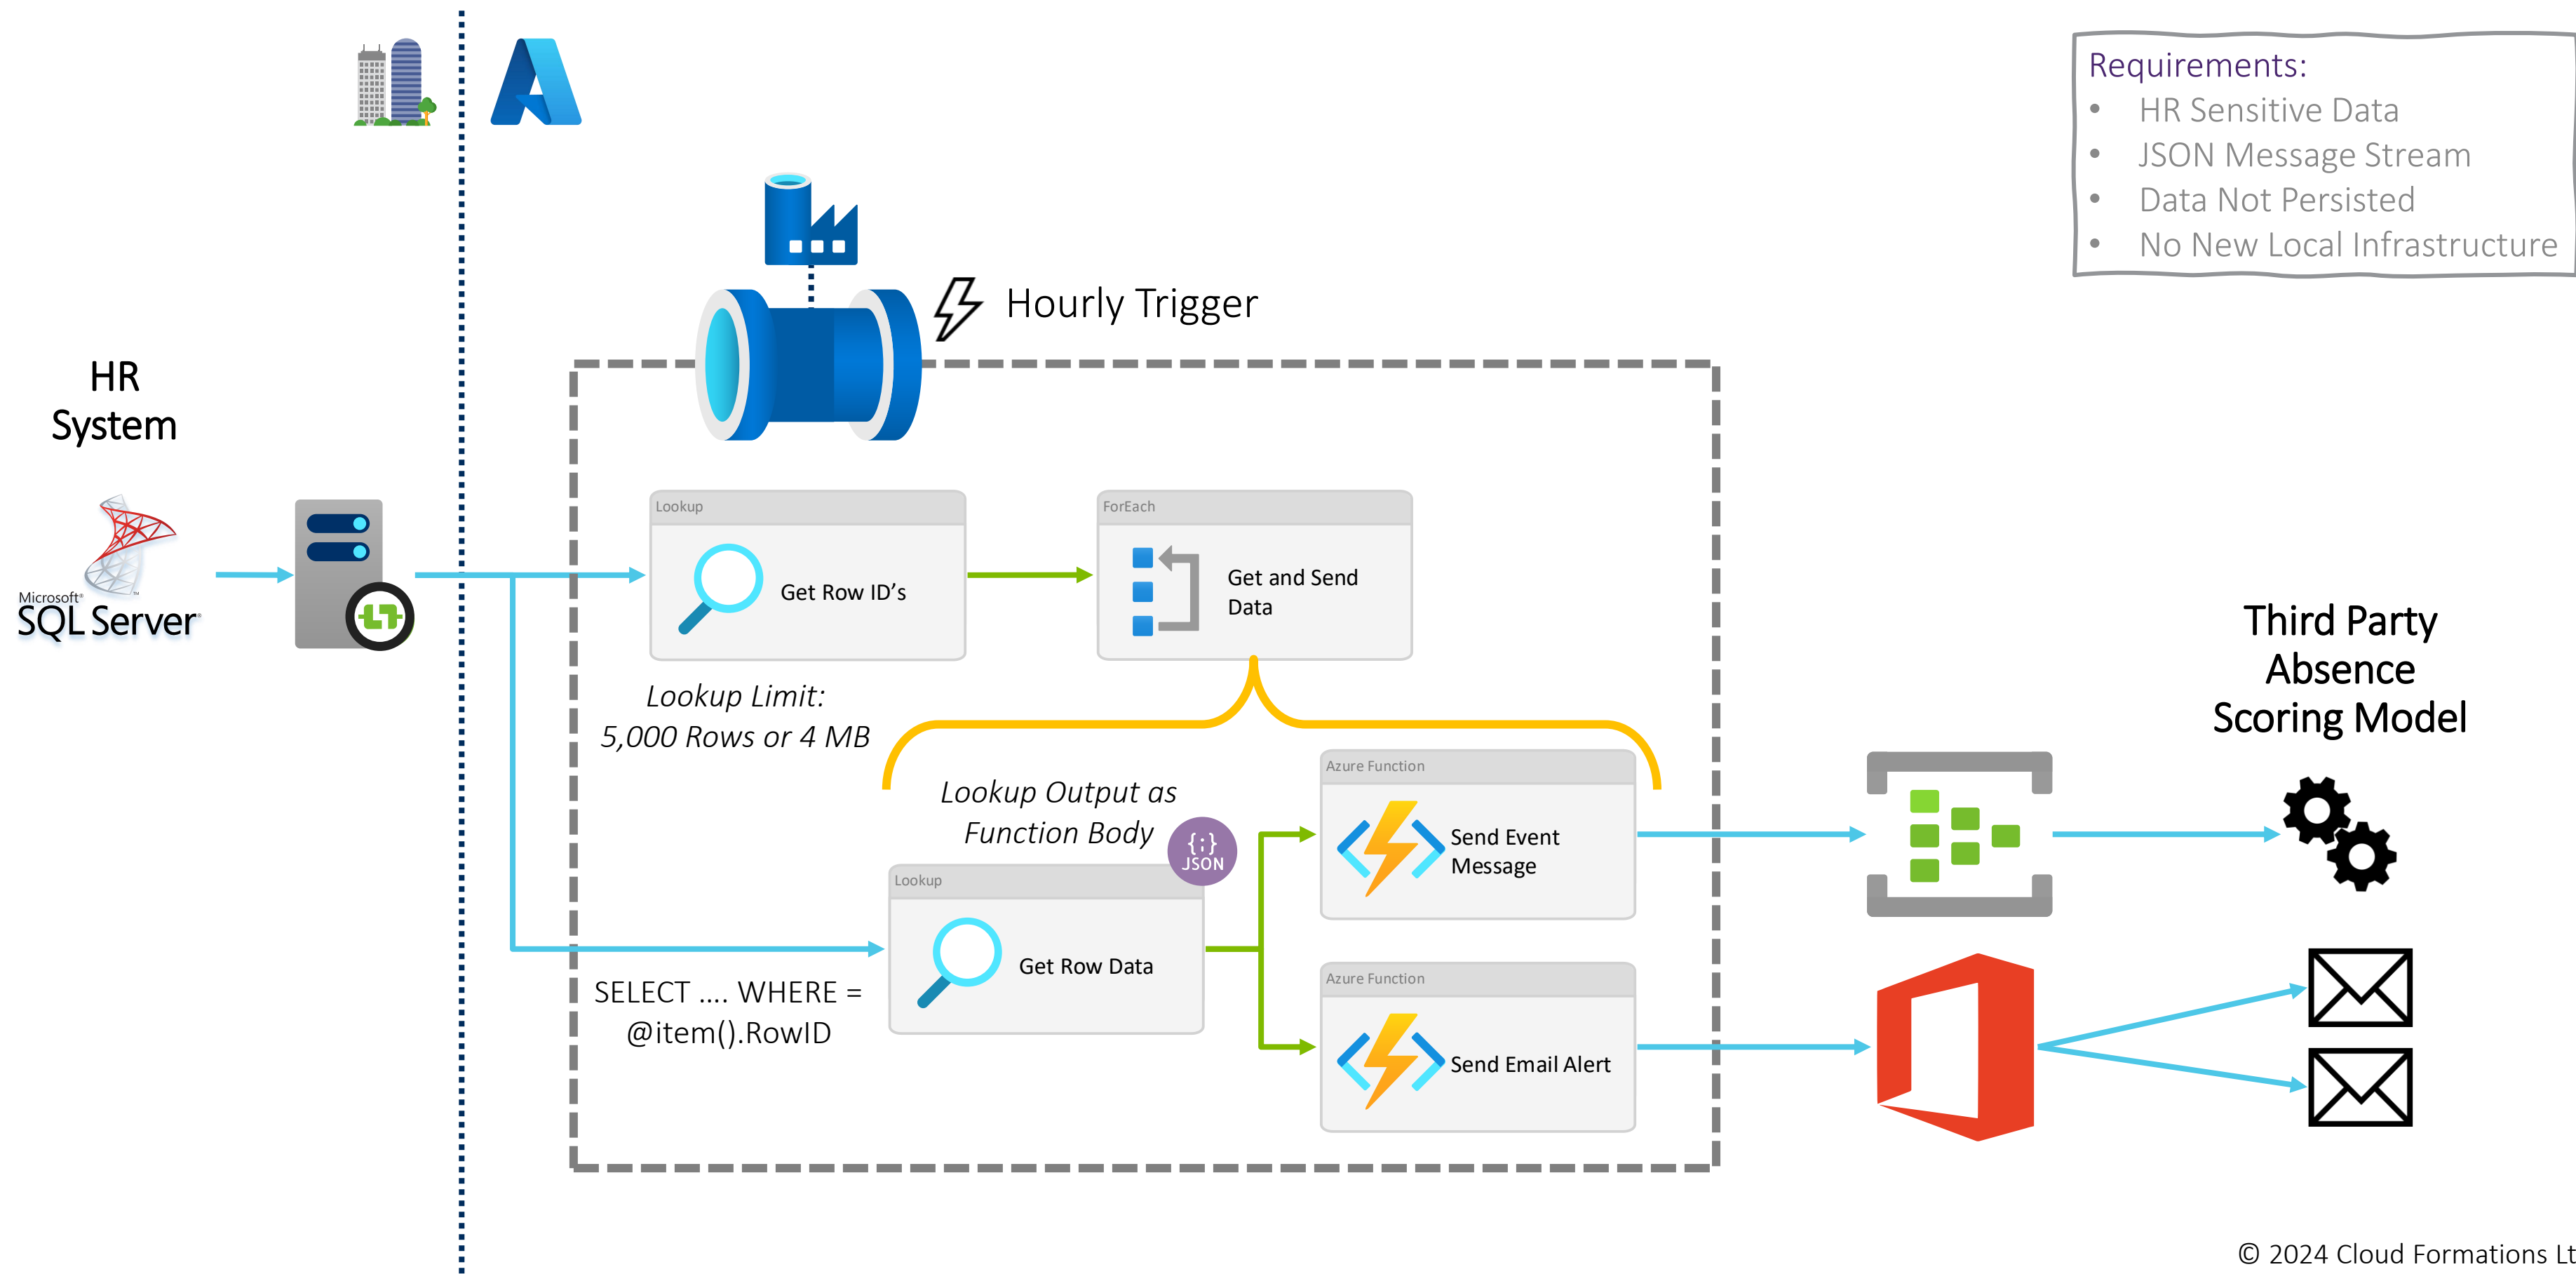

Azure Functions App

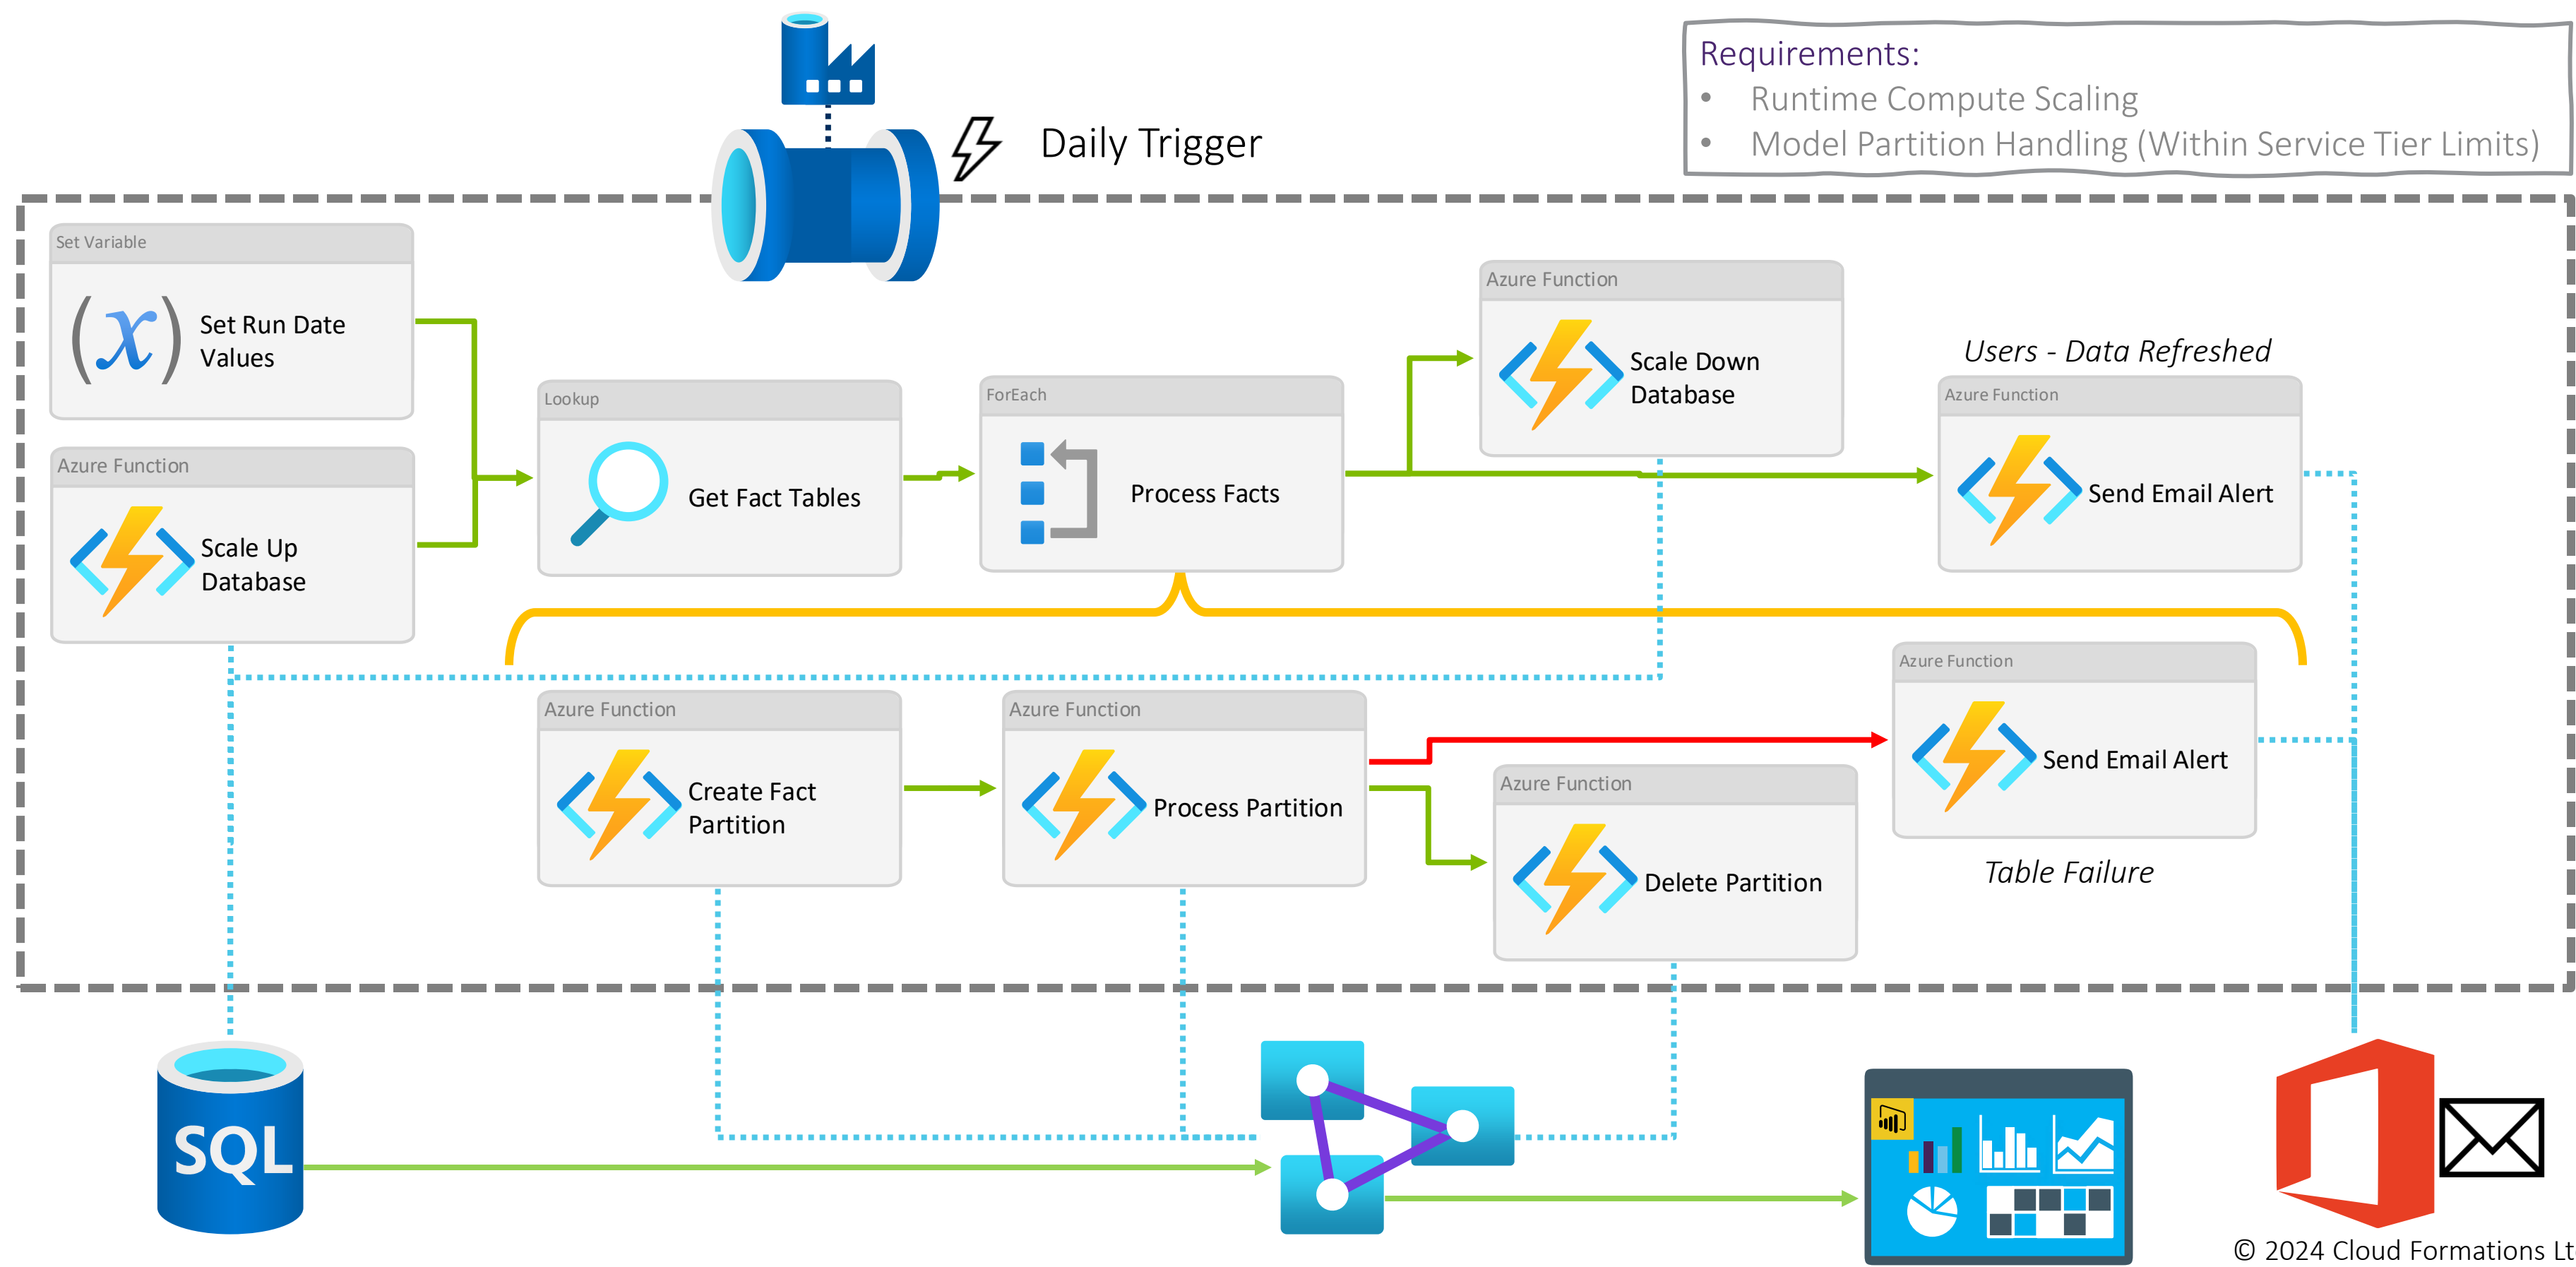

Serverless Scalable Bespoke Executions

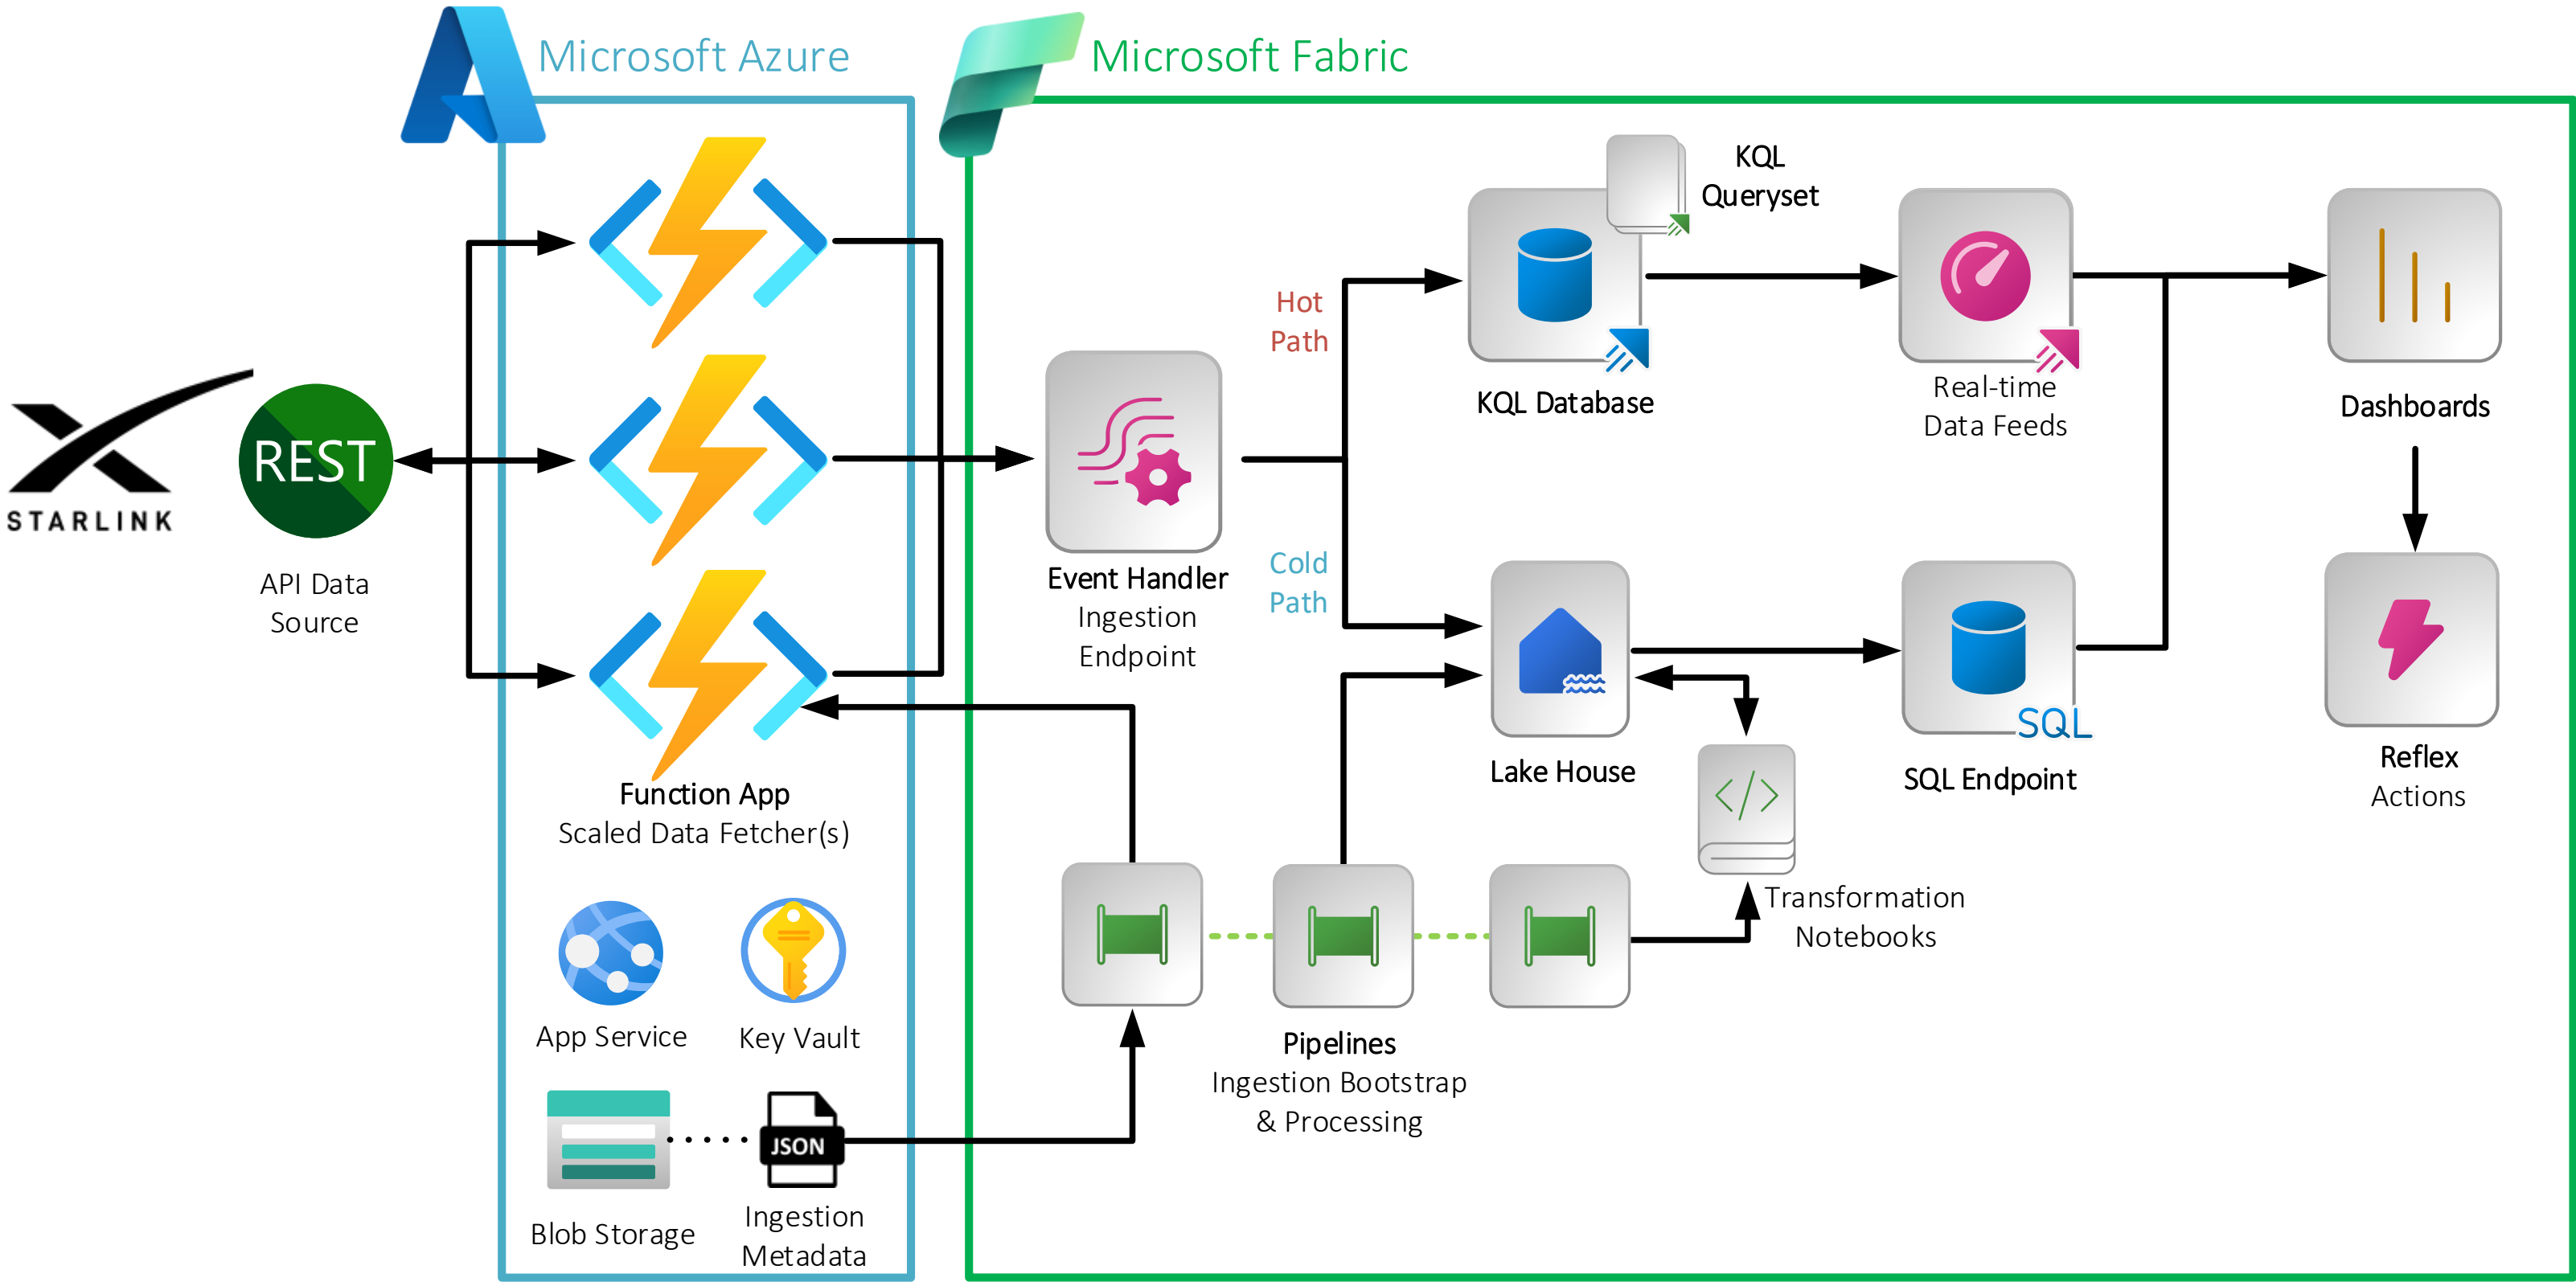

Local Batch Data to Third Party Event Stream

Traditional ETL Stack with Semantic Model

Turning a Batch Data Source Into a Realtime Data Flow

Microsoft Fabric User Data Functions

Microsoft Fabric user data functions are custom reusable code snippets that you can create and run within the Microsoft Fabric platform. These functions allow you to perform complex data transformations and business logic by integrating with various Fabric resources, such as Data Warehouses, Lakehouse's, and Mirrored Databases.
